# 1 Introduction

Sequence Models

Time Series

Trading Strategies

## 2 Materials

## 3 Methodology

## 4 Experiments

## 5 Results

## 6 Conclusions

# Trend

- Moving in a specific direction

# Seasonality

- Patterns repeats in a predictable interval

# Noise

- Set of random values

# Auto-correlation

- Deterministic type of decay: it correlates with a delay copy of itself (lag)

# Trend + Seasonality + Auto-Correlation + Noise

- Trend + Seasonality + Auto-correlation + Noise

# Forecast learned patterns

- A ML model is design to spot patterns. And then, predictions.

# Non-stationary time series

- Time series behaviour can change drastically over time

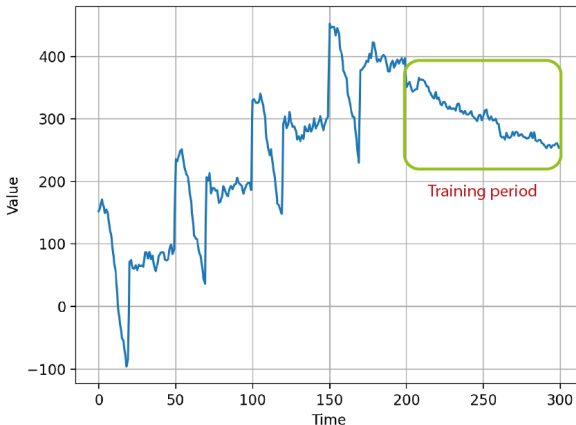

# Non-stationary time series

- Difficult to perform

# Non-stationary time series

- To predict: Train over a limited period of time.

## 6 Conclusions

# Trading Strategies

- Long-term investment strategies
- **Short-term investment strategies**

# Trading Strategies

- **High-frequency trading (HFT)**
  - Very short-term investment strategies
  - High volumes and high speeds.
  - Hold a position for **minutes** or **seconds**.
  - **60–73%** of all US equity trading volume.

## 1 Introduction

# Data description

- **Intraday** stock prices of Amazon (ticker: AMZN)
- Last **60** days (January 25 - March 25 of 2021)
- **2m & 5m** Intervals
- Volume, dividends, **open**, high, low, and close price.
- Data source: **yfinance** (Yahoo! finance)

# Univariate time series

- **Opening prices**
- **2m Intervals:** 6000-6500 observations
- **5m Intervals:** 3000-3500 observations

**Fig 1: Left: 2 minute intervals - Right: 5 minute intervals**

# Split data for training and test

- **2m:** 3500 observations
- **5m:** 2000 observations

Fig 2: **2m:** 0-3500 (Training) 3501-6000 (Test)

# Define inputs and labels for the training dataset

- **2m Intervals**

- Window size: 60 data points (2h)

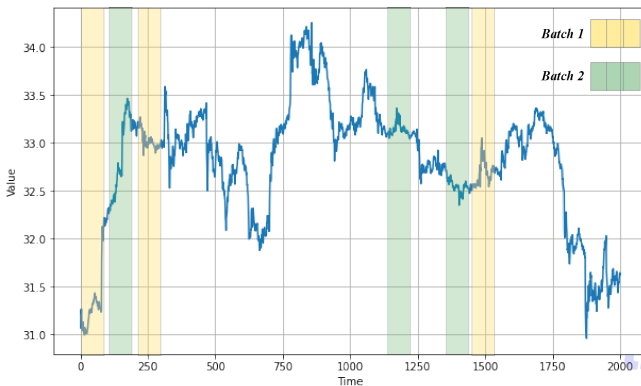

- **5m Intervals**

- Window size: 108 data points (9h)

# Batching the dataset

- **Shuffling the data:** Reduce the variance and the possibility of overfitting
- **Batch data:** Merge randomly selected sequences into a batch for training

## 1 Introduction

## 2 Materials

## 3 Methodology

Build Dataset

Model Setup

Training Parameters

## 4 Experiments

## 5 Results

## 6 Conclusions

# Convolutional Neural Network

- CNN setup:
  - **Layers:** 1
  - **Filters:** 60
  - **Kernel Size:** 5
  - **Strides:** 1
  - **Padding:** Causal (1D convolutions)

# Long short-term memory (LSTM)

- **Layers:** 2
- **Hidden units:** 60
- **Returning Sequence:** True
- **Activation function:** tanh
- **Recurrent activation:** sigmoid

# Dense Layers

- Third Dense Layer **Output layer:**
  - **Hidden units: 1**
- Second Dense Layer:
  - **Hidden units: 10**
  - **Activation Function: ReLU**
- First Dense Layer:
  - **Hidden units: 30**
  - **Activation Function: ReLU**

# Lambda Layer

- Lambda Layer:
  - **Lambda function:**  $\lambda x : x * 400$
  - Applied to scale up the output values of the last dense layer in order to help the learning.

# 1 Introduction

# 2 Materials

# 3 Methodology

Build Dataset

Model Setup

Training Parameters

# 4 Experiments

# 5 Results

# 6 Conclusions

# Fine-tuning parameters

- **Loss Function:** Huber
  - Less sensitive to outliers
- **Optimizer:** Stochastic Gradient Descent (SGD)
  - Iterative method for optimizing an objective function with suitable smoothness properties

# Fine-tuning parameters

- **Learning Rate (LR)**

- Define the optimum learning rate for SGD
- Modulate how the LR of the SGD changes over time
- Loss vs. Learning Rate

# Fine-tuning parameters

- **Training Epochs**

- Compare Loss vs. Training Epochs

## 1 Introduction

Varying window sizes

Varying number of training examples

## 5 Results

## 6 Conclusions

## 1 Introduction

## 2 Materials

## 3 Methodology

## 4 Experiments

Varying window sizes

Varying number of training examples

## 5 Results

## 6 Conclusions

## Varying window sizes 2m

- Define an **optimum window size** in order to face the characteristic of non-stationary time series

- Window size: 40 - Intervals: 2m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	WS	MAE
One-step	2 m	40	11.53

- Window size: 60 - Intervals: 2m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	WS	MAE
One-step	2 m	60	5.7

- Window size: 80 - Intervals: 2m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	WS	MAE
One-step	2 m	80	9.49

- Window size: 46 - Intervals 5m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	WS	MAE
One-step	5 m	46	11.57

- Window size: 72 - Intervals 5m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	WS	MAE
One-step	5 m	72	10.32

- Window size: 108 - Intervals 5m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	WS	MAE
One-step	5 m	108	9.11

## 1 Introduction

## 2 Materials

## 3 Methodology

## 4 Experiments

Varying window sizes

Varying number of training examples

## 5 Results

## 6 Conclusions

# Varying number of training examples 2m

- Performance of the model is affected by varying the number of training examples
- More training examples does not always increase the accuracy of the model

- Training examples: 2500 - Interval: 2m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	TE	MAE
One-step	2 m	2500	8.83

- Training examples: 3500 - Interval: 2m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	TE	MAE
One-step	2 m	3500	5.7

- Training examples: 4500 - Interval: 2m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	TE	MAE
One-step	2 m	4500	21.99

- Training examples: 1500 - Interval: 5m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	TE	MAE
One-step	5 m	1500	6.46

- Training examples: 2000 - Interval: 5m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	TE	MAE
One-step	5 m	2000	9.11

- Training examples: 2500 - Interval: 5m
- Forecasted (Orange) vs. Actual values (Blue)

Forecasting Approach	Interval	TE	MAE
One-step	5 m	2500	9.52

## 1 Introduction

## 5 Results

Forecasting

MAE for one-step and multi-step forecasting

## 6 Conclusions

## 1 Introduction

## 2 Materials

## 3 Methodology

## 4 Experiments

## 5 Results

### Forecasting

MAE for one-step and multi-step forecasting

## 6 Conclusions

# One-step forecasting

- **2-minute intervals**
- Forecasted (Orange) vs. Actual values (Blue)

# One-step forecasting

- **5-minute intervals**
- Forecasted (Orange) vs. Actual values (Blue)

# Four-step forecasting

- **2-minute intervals**
- Forecasted (Blue) vs. Actual values (Orange)

# Four-step forecasting

- **5-minute intervals**
- Forecasted (Blue) vs. Actual values (Orange)

# Fifteen-step forecasting

- **5-minute intervals**
- Forecasted (Blue) vs. Actual values (Orange)
- March 24, 2021.

# Fifteen-step forecasting

- **5-minute intervals**
- Forecasted (Blue) vs. Actual values (Orange)
- March 25, 2021.

## 1 Introduction

## 2 Materials

## 3 Methodology

## 4 Experiments

## 5 Results

Forecasting

MAE for one-step and multi-step forecasting

## 6 Conclusions

# One-step and multi-step forecasting

Forecasting Approach	Interval	WS	TE	MAE
One-step	2 m	60	3500	6.7
One-step	5 m	108	2000	9.94
Four-step	2 m	60	3500	3.49
Four-step	5 m	108	2000	8.07
Fifteen-step	5 m	108	2000	9.84

## 1 Introduction

## 2 Materials

## 3 Methodology

## 4 Experiments

## 5 Results

## 6 Conclusions

- Combination of different deep architectures improves the capability of the model for identifying interrelations within the time series
- Deep architectures can be applied successfully
  - Accuracy, and forecasting speed
- More data does not increase the accuracy of the model
  - Accurate window size
  - Accurate number of training examples
- Future Work
  - Multivariate dataset
  - Apply high-performance computing (HPC) techniques for training the model
  - Develop trading strategies based on fundamental and technical analysis

*Thanks!*
